

Marshal Turner

(404) 988-1242 • marshallturner95@gmail.com • [in/mtturner95](#) | [my website](#)

Data-driven professional with a proven track record in data science, analytics, and engineering. Proficient in utilizing a wide range of programming languages and tools to extract meaningful insights from complex datasets. Experienced in developing and implementing machine learning models for classification and forecasting, resulting in tangible improvements such as lowering MAPE and optimizing revenue streams. Currently pursuing a Master's in Analytics to further deepen my expertise. Seeking opportunities to contribute my skills and expertise to a dynamic team in a forward-thinking organization.

Skills

Programming Languages / Libraries:

R, Python (Pandas, Selenium, BeautifulSoup, Matplotlib, PySpark, Seaborn, Scikit-learn, Tensorflow/Keras, SQLAlchemy, Django), Scala
SQL (T-SQL), Javascript

Big Data Cloud Analytics Platforms:

Snowflake, Github/Gitlab, Docker, GCP, AWS, Azure

Machine Learning Focuses:

Classification and Forecasting

Visualization Tools:

Tableau, Microsoft Power BI, Microsoft Report Builder, D3

Work History

Nolan Transportation Group, Inc. (NTG) - Hybrid

Data Science Analyst, November 2022 - April 2024

- Developed a calculated field derived from various economic indicators for a flagship pricing model. The calculated field then underwent A/B testing to conclude it lowers the MAPE by 1.6%.
- Inherited an outsourced classifier to expand on, test, then push to production as an essential tool for brokers to evaluate lane reliability and determine whether to act on posted loads, in turn, optimizing revenue for over 60% of all company bids.
- Crafted a Django framework website backed by a multi-data source ETL batch pipeline that feeds pricing rates and metrics to assist C-level management with the management of over \$139 million in revenue.
- Constructed an ARIMA forecast model for monthly linehaul rates across the US for Q4 with a monthly average MAPE of 1.9% to establish the logic for a future classifier.

Pricing BI Analyst, 2021 - November 2022

- Erected an autonomous JIRA REST API tap script that parses Outlook emails to create and assign JIRA tasks with preselected details. Dynamically changed how internal teams operate, saving approximately \$50,000 annually in labor costs.
- Collaborated with the NTG pricing team on the automation of various price point load calculations for data mining and data analysis by creating online apps, building SSRS, Tableau Reports, and Excel Macros.
- Engineered a new SQL table and stored procedure for geographic insights on Mexico and Canada to map all budding lane activity in Tableau.

Vanderlande Industries - Remote

Project Manager, 2020-2021

- Lead sales engineer for the largest CPSS midsize PAX RFB Vanderlande has participated in (\$250+ mill) to then when RFB bid.
- Presented numerous Request for Proposals and Bids to C-Level audience members.
- Consistently facilitated meetings with various internal stakeholders to open and close different sales phases for each Request for Proposal or Bid.
- Organized bid schedules for participating departments, models and pricing solutions for various qualities of service, presents and leads meetings on the pipeline stages for each solution.
- Designed and documented a sales engineering learning curriculum for new hires to streamline and improve the team onboarding process.

Education

Georgia Institute of Technology: Masters of Science in Analytics

May 2023 - Fall 2025

Kennesaw State University: BS in Systems and Industrial Engineering

Jan 2015 - May 2018
